

# VBKOM & SENSMINING

Collaborating to bring the smart mining  
solution data alive in your technical  
operational planning

Making SENS of your mining data

## Collaborating to bring the smart mining solution data alive in your technical operational planning

The partnership between Sens Mining and VBKOM leverages the fusion between data, technology and informed decision-making to offer a solution that will empower our clients to achieve success.

In this partnership, Sens Mining is the System Provider and Mining Data specialist, and the capabilities they bring to the solution include:

- On-equipment/On-Site Hardware Installation
- Unique Data Hopping Setup that Requires Minimal Data Network Installation
- Cloud-Based Back-end Data Management
- Standard Performance Report Customisation
- Client System Training
- Maximise Diesel Rebate Claims
- Equipment Key Control to validate driver credentials before allowing equipment to start

VBKOM's role is to offer Total Mining Value Chain Consulting, and the capabilities are:

- SensMining Data Analysis
- Improvement Initiative Identification and Prioritisation Support (e.g. Mine design changes required)
- Improvement Initiative Technical Consulting (e.g. Short-term schedule and Life-of-Mine plan updates)
- Initiative Implementation Management and Tracking

### Who will benefit?

All surface mining operations that need to make informed decisions and need to save money on their operational costs while improving production and safety within their operations.

- Mines without on-equipment data systems that provide real-time performance information
- Mines without data networks in the mining area
- Mines that would like to claim fuel usage tax benefit
