

VBKOM & SENSMINING

Collaborating to bring the smart mining
solution data alive in your technical
operational planning

Making SENS of your mining data

Collaborating to bring the smart mining solution data alive in your technical operational planning

The partnership between Sens Mining and VBKOM leverages the relationship between data, technology and informed decision-making to offer a solution that will empower our clients to achieve success.

A strategic partnership between **Sens**^{MINING} and **VBKOM** to help you make **SENS** of your mining data

The aim of this partnership is to assist our shared clients in identifying and implementing lasting change improvement initiatives that will make their successes a reality, such as:

- Operator performance improvement
- Equipment direct operating hour increases
- Increased bench utilisation
- Loading rate improvement
- Shift change optimisation
- Cycle time improvements
- Better overall equipment and resource utilisation

Who will benefit?

All surface mining operations need to make informed decisions and need to save money on their operational costs while improving production and safety within their operations.

- Mines without on-equipment data systems that provide real-time performance information
- Mines without data networks in the mining area
- Mines that would like to claim a fuel usage tax benefit

Identify the opportunities with **Sens**^{MINING}

Implement the lasting changes with **VBKOM**
